

THE COMMUNITY CABINET

Community has a new, truly great full-range cabinet. We believe it is the ultimate full-range PA system for monitoring, club and touring applications. We named it (are you ready?) the **PBLsuper90**. PBL for the excellent round-backed cabinet that was its forerunner, and Super90 for the new 90° radial HF section incorporated into its dazzling face.

The Super90 radial horn is, in our estimation, the best ninety degree horn we've designed. As an integrated part of this single 15" bass-reflex cabinet its performance is merely superb. The round-backed design of the **PBLsuper90** is brought to full advantage through the use of a tuned, ducted port, beautifully reinforcing bass response down to 40Hz. Its smooth, wide-range response and uniform coverage . . . well, it speaks for itself.

This easily portable sound system is the consummation of ten years intensive research in wedding the qualities of advanced fiberglass technology to

PBLs90 - 1/3 octave response 0° on axis

the physics of sound reinforcement. Hand-crafted construction and rugged detailing insure that the **PBLsuper90** is engineered for a lifetime of reliable service and a multitude of uses—a lasting investment in your career in professional sound.

The Community Cabinet—still the ultimate in sound reproduction technology. Strong. Beautiful. Efficient. Performing professionally in all applications.

The PBLsuper90 from Community. Get it. It's the best there is.
